(2) Landscape and aesthetic value

The object of this value is to identify trees that are of particular importance to the community due to their substantial contribution to the surrounding landscape.

A tree may be considered to be of landscape and aesthetic value if it is situated in a prominent location when viewed from a public place and it:

- (a) contributes significantly to the surrounding landscape based on its overall form, structure, vigour and aesthetic values; or
- (b) represents an outstanding example of the species, including age, size or habit; or
- (c) is an exceptional example of a locally native species that reached maturity prior to urban development in its immediate vicinity.

Statement against the Criteria

This tree is located on built-up urban area to which the above criteria apply. The tree meets the criteria of Landscape and Aesthetic value as defined under the *Urban Forest Act 2023*.

This tree is an exceptional example of a local keystone species that existed prior to urban development in the area. Its grand size contributes significantly to the nearby surrounding landscape, and due to its substantial size, is contributing significantly to native wildlife connectivity. The unique lean of this tree is one of its outstanding features.

For the above reasons I am satisfied that the landscape and aesthetic value is high, and that the tree significantly contributes to the above value in the surrounding area.

Furthermore, I am not satisfied that the tree meets the criteria for cancellation of registration.
